

Data Sheet

2-step solenoid valve

Type **ICLX 32-150**

65 bar/52 bar valves used in wet return and suction lines for the opening against high differential pressure

ICLX 2-step solenoid valves belong to the ICV family.

ICLX are used in suction lines for the opening against high differential pressure, e.g. after hot gas defrost in large industrial refrigeration systems with ammonia, fluorinated refrigerants or CO₂.

The small sizes are designed for MWP of 65 bar, while large sizes have MWP of 52 bar.

The ICLX valve is factory configured to open in 2 steps.

By following a simple procedure the valve can be configured to open in 1 step only.

In 2-step configuration, step 1 opens to approx. 10% of the capacity after the pilot solenoid valves are energized.

Step 2 opens automatically when the pressure differential across the valve has decreased to approx. 1.25 bar / 18 psig.

The ICLX valve comprises five main components: Valve body, top cover, function module and 2 pilot solenoid valves. On ICLX 32 – 150 the top cover and function module are factory assembled.

Features

- Designed for industrial refrigeration applications for a maximum working pressure of:
 - ICLX DN 32 to DN 65 (80): 65 bar / 943 psig.
NOTE: Operating valve MWP is dependent on MWP of installed pilots.
 - ICLX DN 100 to DN 150: 52 bar / 754 psig
- Applicable to HCFC, HFC, R717 (Ammonia) and R744 (CO₂)
- Can be used in chemical and petro-chemical applications
- Direct welded connections
- Connection types include butt weld, socket weld and solder connections
- Low temperature steel body
- Low weight and compact design
- Only one signal required for both pilot solenoid valves
- The ICLX main valve top cover can be oriented in any direction without the function of pilot valves being affected
- Especially suitable for systems where low pressure drop is required
- Stabilizes working conditions and eliminates pressure pulsations during opening after defrosting
- Provides safety against pressure "shocks" as the valve can only open fully when $\Delta p < 1.25 \text{ bar} / 18 \text{ psig}$
- Cavitation resistant valve seat
- Manual opening possible
- PTFE seat provides excellent valve tightness
- Service friendly design
- Classification: DNV, CRN, BV, EAC etc. To get an updated list of certification on the products please contact your local Danfoss Sales Company

Functions

Function

Figure 1: ICLX 32-65

Figure 2: ICLX 100-150

The ICLX valve is used as a shut-off valve in suction lines to open after hot gas defrost.

The valve is a pilot controlled valve operated by an external pilot pressure source. This means that the valve can operate with no internal pressure differential (P_d) at all.

Low P_d is the key objective and makes the ICLX valve ideal for applications that are sensitive to differential pressure. Though P_d is kept low, it can still be quantified, and must be considered when choosing valve size. See section - [Selection of ICLX valve](#) - for the impact.

The main valve is provided with two pilot solenoid valves, as well as a nipple for connection to external pilot pressure.

The external pilot pressure line must be connected to a system pressure (p_2) which is at least 1.5 bar / 20 psi higher than the inlet pressure (p_1) of the valve. The difference between the external pilot pressure and the inlet pressure of the valve defines the maximum opening differential pressure (MOPD) of the ICLX.

The ICLX is kept open when power is applied to the coils placed on the EVM pilot solenoid valves pos. 1 and pos. 2.

The ICLX is closing and kept closed when the coils on EVM pilot solenoid valves pos. 1 and pos. 2 are de-energised.

The pilot solenoid valve (pos.1) allows external pilot pressure (p_2) to the bottom of the servo piston and thus opens the first step corresponding to approx. 10% of the valve capacity. At the same time the bleed spring will be compressed. This will start a pressure equalization of the inlet pressure (p_1) to the outlet pressure. When the differential pressure across the valve has fallen to approx. 1.25 bar / 18 psig the spring will be strong enough to open the second step and open the valve for full capacity.

This way high-pressure pulsations, which would occur when opening for full capacity in one step, can be avoided.

ICLX must not be used in pipe systems where the differential pressure across the main valve in open position can exceed 1 bar / 15 psig, otherwise the step two on the valve will close.

Figure 3: Two step opening principle

NOTE:

The ICLX valve is kept in its open position by hot gas. The hot gas condenses in the cold valve and creates liquid under the servo piston. When the pilot valves change status to close the ICLX, the pressure on the servo piston equalises with the suction pressure through the pilot valve (pos. 2). This equalisation takes time because condensed liquid is present in the valve.

The exact time taken from when the pilot valves change position to complete closing of the ICLX will depend on temperature, pressure, refrigerant and size of valve. Thus an exact closing time for the valves cannot be given but, in general, lower temperatures give longer closing times.

It is very important to take the closing times into consideration when hot gas defrost is performed on evaporators.

Steps must be taken to ensure that the hot gas supply valve is not opened before the ICLX in the suction line is completely closed. If the hot gas supply valve is opened before the ICLX in the suction line is closed, considerable energy will be lost and potentially dangerous situations might arise because of "liquid hammer". In ICLX valves, the spring-loaded second stage might be induced to hammer by gas and liquid being forced through the valve at $\Delta p > 1.5$ bar across the ICLX. The final result could be severe damage to the valve.

As a rule of thumb a closing time of 2 minutes can be used as a starting point. The optimum closing time for each individual system must be determined at initial start-up of the plant at intended operational conditions. It is recommended to check if the closing time needs to be changed when conditions changes (suction pressure, ambient temp. etc.) and closing time should be checked at service of the valve. Once the optimum closing time has been identified it is recommended to add a safety margin of 30 sec. to the optimum closing time.

Media

Refrigerants

Applicable to HCFC, HFC, R717 (Ammonia) and R744 (CO₂).

New refrigerants

Danfoss products are continually evaluated for use with new refrigerants depending on market requirements.

When a refrigerant is approved for use by Danfoss, it is added to the relevant portfolio, and the R number of the refrigerant (e.g. R513A) will be added to the technical data of the code number. Therefore, products for specific refrigerants are best checked at store.danfoss.com/en/, or by contacting your local Danfoss representative.

Product specification

Pressure and temperature

Table 1: Pressure and temperature data

Description	Values
Media temperature range	-60 °C / +120 °C / -76 °F / +248 °F
Max. working pressure	The valve is designed for a Max. working pressure: <ul style="list-style-type: none"> • Size DN 25 to DN 65 (80): 65 bar (943 psig)⁽¹⁾ • Size DN 100 to DN 150: 52 bar (754 psig)
Max. opening pressure differential (MOPD):	21 bar / 305 psi @ external pressure 1.5 bar / 22 psi higher than inlet pressure of the valve 40 bar / 580 psi @ external pressure 2 bar (30 psi) higher than inlet pressure of the valve

⁽¹⁾ MWP of the system main valve + pilots is defined by lowest MWP of the single pilot (not all pilots are designed for MWP of 65 bar).

 Table 2: C_v and K_v values

Unit	ICLX 32	ICLX 40	ICLX 50	ICLX 65	ICLX 100	ICLX 125	ICLX 150

Surface coating

Table 3: Surface coating

Description	Values
Surface protection	The ICLX external surface is zinc-chromated to provide good corrosion protection

Coils

Table 4: Coils

Description	Values
Coil requirements:	Both coils to be IP67 EVM NC: 10W AC (or higher) for MOPD up to 21 bar EVM NC: 20W AC for MOPD 21 – 40 bar EVM NO: 10W AC (or higher)

⁽¹⁾MWP of the system main valve + pilots is defined by lowest MWP of the single pilot (not all pilots are designed for MWP of 65 bar).

The ICLX Concept

The ICLX concept is developed to highest flexibility of direct welded connections. For valve sizes ICLV 32 – ICLV 65 a wide range of connection sizes and types is available. ICLV 100 – ICLV 150 are available in butt-weld DIN and butt-weld ANSI nominal sizes. The direct welded (non-flanged) connections secures low risk of leakage.

Design

Valve body and top cover material

Low temperature steel

There are seven valve bodies available

¹ MWP of the system main valve + pilots is defined by lowest MWP of the single pilot (not all pilots are designed for MWP of 65 bar).

Connections

There is a wide range of connection types available with ICLX valves:

Table 8: Connections

- **D**: Butt weld, EN 10220
- **A**: Butt weld, ANSI (B 36.10)
- **SOC**: Socket weld, ANSI (B 16.11)
- **SD**: Solder connection, EN 1254-1
- **SA**: Solder connection, ANSI (B 16.22)

The ICLX valves are approved in accordance with the European standard specified in the Pressure Equipment Directive and are CE marked.

Spare parts and accessories

Figure 30: ICV PM flanged valve housings

ICV PM flanged valve housings

ICV PM flanged valve housings can replace the PM valves on already installed refrigeration systems.

Pressure range

The ICV PM valve housing is designed for a max. working pressure of 28 bar g / 406 psig and therefore a suitable replacement for PM valves in the service market. They also offer the same drop-in dimensions as the PM valves.

Figure 31: Assembly

Table 42: ICV PM flanged valve housings

Description	Code no.
ICV 25 PM Valve housing	027H2119 ⁽¹⁾

ICV 40 PM Valve housing	027H4128 ⁽¹⁾
ICV 50 PM Valve housing	027H5127 ⁽²⁾
ICV 65 PM Valve housing	027H6128 ⁽²⁾

⁽¹⁾ Includes ICV PM valve housing, flange gaskets and flange bolts.

⁽²⁾ Includes ICV PM valve housing, flange gaskets, flange bolts and flange nuts.

NOTE:

Function modules and top covers must be ordered separately (see the section **Ordering**).

Figure 32: ICV (H)A4A flanged valve housings

ICV (H)A4A flanged valve housings

ICV (H)A4A flanged valve housings can replace the (H)A4A valves on already installed refrigeration systems.

Pressure range

The ICV (H)A4A valve housing is designed for a max. working pressure of 28 bar g / 406 psig and therefore a suitable replacement for (H)A4A valves in the service market. They also offer the same drop-in dimensions as the (H)A4A valves.

Certificates, declarations, and approvals

The list contains all certificates, declarations, and approvals for this product type. Individual code number may have some or all of these approvals, and certain local approvals may not appear on the list.

Some approvals may change over time. You can check the most current status at danfoss.com or contact your local Danfoss representative if you have any questions.

The ICV valve concept is designed to fulfil global refrigeration requirements. The Factory assembled ICLX is CE and UL approved. For specific approval information, please contact Danfoss.

Online support

Danfoss offers a wide range of support along with our products, including digital product information, software, mobile apps, and expert guidance. See the possibilities below.

The Danfoss Product Store

The Danfoss Product Store is your one-stop shop for everything product related—no matter where you are in the world or what area of the cooling industry you work in. Get quick access to essential information like product specs, code numbers, technical documentation, certifications, accessories, and more.

Start browsing at store.danfoss.com.

Find technical documentation

Find the technical documentation you need to get your project up and running. Get direct access to our official collection of data sheets, certificates and declarations, manuals and guides, 3D models and drawings, case stories, brochures, and much more.

Start searching now at www.danfoss.com/en/service-and-support/documentation.

Get local information and support

Local Danfoss websites are the main sources for help and information about our company and products. Find product availability, get the latest regional news, or connect with a nearby expert—all in your own language.

Find your local Danfoss website here: www.danfoss.com/en/choose-region.

Danfoss Learning

Danfoss Learning is a free online learning platform. It features courses and materials specifically designed to help engineers, installers, service technicians, and wholesalers better understand the products, applications, industry topics, and trends that will help you do your job better.

Create your Danfoss Learning account for free at www.danfoss.com/en/service-and-support/learning.

Spare Parts

Get access to the Danfoss spare parts and service kit catalog right from your smartphone. The app contains a wide range of components for air conditioning and refrigeration applications, such as valves, strainers, pressure switches, and sensors.

Download the Spare Parts app for free at www.danfoss.com/en/service-and-support/downloads.

Coolselector®2 - find the best components for you HVAC/R system

Coolselector®2 makes it easy for engineers, consultants, and designers to find and order the best components for refrigeration and air conditioning systems. Run calculations based on your operating conditions and then choose the best setup for your system design.

Download Coolselector®2 for free at coolselector.danfoss.com.
