

## Data Sheet

Safety relief valves  
Type **BSV-8**

Used as pressure limiting devices to protect hydraulic systems and components

BSV is a standard, back pressure independent safety relief valve, especially designed for protection of small components against excessive pressure and as a pilot valve for the pilot operated internal safety valve, type POV.

BSV is an angle-way safety relief valve which can operate with a very high back pressure. The valve is designed to meet the strict quality demands and safety requirements for refrigeration installations, specified by the international classification societies.

As the valve is not dependent on the back pressure, it is recommended for use as an internal safety relief valve. However, the valve can also be used as an external safety relief valve. The spring housing is tightly sealed to avoid refrigerant leakage.

The inlet flow diameter of the BSV 8 is 8.0 mm (5/16 in.).

The valves can be delivered with set pressures between 10 and 25 bar (145 and 363 psig).

Standard pressure setting valves having "TÜV Pressure Setting Certificate" with each valve are also available.

**Features:**

- Classification: DNV, BV, EAC etc. To get an updated list of certification on the products please contact your [local Danfoss Sales Company](#).

## Media

### **Refrigerants**

Applicable for the refrigerants HCFC, HFC, R717 (Ammonia), R744 (CO<sub>2</sub>). Flammable hydrocarbons are not recommended. For further information please contact your local Danfoss Sales Company.

### **New refrigerants**

Danfoss products are continually evaluated for use with new refrigerants depending on market requirements.

When a refrigerant is approved for use by Danfoss, it is added to the relevant portfolio, and the R number of the refrigerant (e.g. R513A) will be added to the technical data of the code number. Therefore, products for specific refrigerants are best checked at [store.danfoss.com/en/](https://store.danfoss.com/en/), or by contacting your local Danfoss representative.

## Product specification

### Design

BSV is designed as a standard safety relief valve (DIN 3320) which are recommended for refrigeration plants. On a rise in pressure above the set pressure, the safety relief valve will initially start opening slightly, to minimise the outlet of refrigerant. If the pressure continues to increase, the valve will open fully. The safety relief valve will be fully open before the pressure is 10% higher than set pressure, and fully closed before the pressure is 10% below set pressure.

The valve is recommended as an internal safety relief valve because its function is independent of the back pressure. The valve can also be used as an external safety relief valve.

Figure 1: Design

### Pressure and temperature data

#### Pressure

Pressure setting range: 10 – 25 bar (145 – 363 psig), For further information please contact your [local Danfoss Sales Company](#).

The valves are designed for:

Strength test: 43 bar (624 psig)

Leakage safety: 25 bar (363 psig)

Special circumstances such as vibrations (which should be avoided) and oscillating pressure may require an increased difference between the operational pressure and the closing pressure.

#### Pressure setting

The operating pressure of the plant should be at least 15% below the set pressure. This allows a perfect re-seating of the safety relief valve after having been activated.

#### Temperature range for BSV used as an external safety relief valve:

-30 °C /+ 100 °C (-22 °F /+ 212 °F)

#### Temperature range for BSV used as a pilot valve for POV:

-50 °C /+ 100 °C (-58 °F /+ 212 °F)

#### NOTE:

For temperatures below -30 °C (-22 °F), the valve may not re-seat to a 100% gas tightness when activated.

### Housing

Made of special steel approved for low temperature application. Spindle and seat are made of stainless steel, to ensure precise operation even during extraordinary conditions. The gasket of the valve cone is made of a special neoprene compound.

## Material specification

## Installation

To ensure exact operation of the safety relief valve it should be installed with the spring housing upwards. If the valve is mounted as an internal safety relief valve without any demand for exact opening pressure, the valve may be fitted with the spring housing in other positions. When the valve is mounted, it is important to avoid the influence of static, dynamic and thermal stress.

A very precise technique has been applied for the production of the seal. However, this seal can still be damaged, if dirt is blown from the pipe system into the valve.

## Re-calibration/servicing

In certain countries the authorities demand that the valves are checked at least once a year (see local rules).

## Control/Identification

After adjustment of the set pressure at Danfoss, the valves are sealed. For that reason Danfoss can only guarantee correct operation, as long as the seal remains unbroken.

All valves are provided with a metal plate with the following information:

- Flow diameter
- Set pressure
- Date of production
- Production number
- Type approved code

## Transport/Handling

The valves are fitted with special protection covers and packed in purpose made transportation cartons. It is important that the cover remains fitted around the valve until it is installed.

### **i** NOTE:

**To ensure the exact and precise operation of the valve it must be handled with care.**

## Connections

### Available with the following connections:

Outside pipe thread T (ISO 228/1)

Figure 3: Connections T

Table 2: T outside pipe thread, (ISO 228/1)

Size mm	Size in.	Inlet	Outlet	L [mm]	L [in.]
8	5/16	G 3/4	G 1	17	0.67

## Capacity

The design and construction of the safety relief valve has been tested and approved by TÜV. This test comprises control of the function of the valve as well as measuring of the capacity, which is the basis of the curves and tables on the following pages. The values in the table are based on saturated gas.

If e.g. back pressure or superheated gas have to be taken into consideration, the formulas or the Danfoss computation program Coolselector can be used.

Table 3: Capacity

Valve	Nominal size		Flow diameter	Flow area	De-rated, certified coefficient of discharge
	Inlet	Outlet	d <sub>0</sub>	A <sub>0</sub>	K <sub>dr</sub>
BSV 8	15 mm	20 mm	8 mm	50 mm <sup>2</sup>	0.46
	1/2 in.	3/4 in.	0.315 in.	0.078 in <sup>2</sup>	

### **i** NOTE:

The discharge capacity of the safety relief valves are based on (ISO 4126-1/EN 1268-1 / prEN 1313 6 (1998)).

Table 4: Discharge capacity

$q_m = 0.2883 \times C \times A_0 \times K_{dr} \times K_b \times \sqrt{p/v}$	
<b>q<sub>m</sub></b>	Discharge capacity (kg/h)
<b>C</b>	Discharge function depending of the actual refrigerant (k) see table 2.
<b>A<sub>0</sub></b>	Flow area of the safety relief valve (mm <sup>2</sup> ).

## Safety relief valves, Type BSV-8

$$q_m = 0.2883 \times C \times A_0 \times K_{dr} \times K_b \times \sqrt{p/v}$$

<b>K<sub>dr</sub></b>	De-rated coefficient of discharge ( $K_{dr} = K_d \times 0.9$ ), (the $K_{dr}$ is certified by TÜV) see table 1.
<b>K<sub>b</sub></b>	Correction factor for sub-critical flow. (-) $K_b = 1.0$ when the back pressure is lower than approx. $0.5 \times$ relieving pressure ( $P_b < 0.5 \times p$ ).
<b>v</b>	Specific volume of the vapour. (m <sup>3</sup> /kg)
<b>P<sub>set</sub></b>	Set pressure, the predetermined pressure at which a pressure relief valve under operation starts to open ( $p_{set}$ is indicated on the metal plate on the safety relief valve). (bar g)
<b>P<sub>atm</sub></b>	Atmospheric pressure. (1 bar)
<b>p</b>	Relieving pressure, $p = p_{set} \times 1.1 + P_{atm}$ (bar a)

### NOTE:

For back pressure higher than  $0.5 \times p$ , the Danfoss computer program Coolselector or the above mentioned standard must be used when calculating the capacity.

Table 5: Properties of Refrigerants

	in.	1.77	5.91	1.26	1.97	1.81	3.3 lb

**NOTE:**

Specified weights are approximate values only.

## Ordering

### How to order

The table below is used to identify the valve required.

Please note that the type codes only serve to identify the valves, some of which may not form part of the standard product range. For further information please contact your local Danfoss Sales Company.

**Table 9: Example for type codes**

## Online support

Danfoss offers a wide range of support along with our products, including digital product information, software, mobile apps, and expert guidance. See the possibilities below.

### The Danfoss Product Store

The Danfoss Product Store is your one-stop shop for everything product related—no matter where you are in the world or what area of the cooling industry you work in. Get quick access to essential information like product specs, code numbers, technical documentation, certifications, accessories, and more.

Start browsing at [store.danfoss.com](https://store.danfoss.com).

### Find technical documentation

Find the technical documentation you need to get your project up and running. Get direct access to our official collection of data sheets, certificates and declarations, manuals and guides, 3D models and drawings, case stories, brochures, and much more.

Start searching now at [www.danfoss.com/en/service-and-support/documentation](https://www.danfoss.com/en/service-and-support/documentation).

### Danfoss Learning

Danfoss Learning is a free online learning platform. It features courses and materials specifically designed to help engineers, installers, service technicians, and wholesalers better understand the products, applications, industry topics, and trends that will help you do your job better.

Create your Danfoss Learning account for free at [www.danfoss.com/en/service-and-support/learning](https://www.danfoss.com/en/service-and-support/learning).

### Get local information and support

Local Danfoss websites are the main sources for help and information about our company and products. Find product availability, get the latest regional news, or connect with a nearby expert—all in your own language.

Find your local Danfoss website here: [www.danfoss.com/en/choose-region](https://www.danfoss.com/en/choose-region).

### Spare Parts

Get access to the Danfoss spare parts and service kit catalog right from your smartphone. The app contains a wide range of components for air conditioning and refrigeration applications, such as valves, strainers, pressure switches, and sensors.

Download the Spare Parts app for free at [www.danfoss.com/en/service-and-support/downloads](https://www.danfoss.com/en/service-and-support/downloads).

### Coolselector®2 - find the best components for you HVAC/R system

Coolselector®2 makes it easy for engineers, consultants, and designers to find and order the best components for refrigeration and air conditioning systems. Run calculations based on your operating conditions and then choose the best setup for your system design.

Download Coolselector®2 for free at [coolselector.danfoss.com](https://coolselector.danfoss.com).
